PROFILE

AI Automation & Full-Stack Developer with 2+ years of experience designing intelligent automation solutions and scalable web applications. Strong expertise in Python, FastAPI, Django, REST APIs, and workflow automation using n8n, Make, Zapier, and other integration platforms, connecting AI services, business applications, databases, communication systems, and third-party APIs. Experienced in building Generative AI applications, AI agents, and LLM-powered workflows using LangChain, LangGraph, and modern AI frameworks. Proficient in cloud deployment, Docker, CI/CD pipelines, Git-based workflows, and delivering secure, scalable, and production-ready AI and web solutions.

PROFESSIONAL EXPERIENCE

AI Automation & Full-Stack Engineer

Builberg | Jun 2026 – Present

- Designed AI automation workflows using n8n, Make, Zapier, and enterprise API integrations.
- Built LLM-powered AI agents using LangChain, LangGraph, MCP, and prompt engineering.
- Developed scalable web applications using Python, FastAPI, Django, React, and PostgreSQL.
- Deployed applications and automations using Docker, AWS, Railway, Render, and GitHub Actions.

Full-Stack AI Engineer

Camden Health System | Sep 2025 – May 2026

- Developed CRM and business applications using Python, FastAPI, Django, React, and PostgreSQL.
- Built AI chatbots and intelligent workflows using LangChain, n8n, and Large Language Models.
- Designed RESTful APIs and responsive interfaces using React, TypeScript, and Tailwind CSS.
- Managed cloud deployments using Docker, AWS, Render, Vercel, and GitHub Actions.

Python Developer

Enigmatix | Feb 2024 – Aug 2025

- Developed backend services and REST APIs using Python, Django, FastAPI, and PostgreSQL.
- Designed database schemas, CRUD operations, and scalable backend architectures.
- Tested, documented, optimized, and maintained production-ready APIs with Postman.
- Built AI chatbot features using LangChain, RAG, vector databases, and prompt engineering.

SKILLS

Backend Development

Python, FastAPI, Flask, Django, Node.js, Backend Architecture

Frontend Development

React.js, Next js, TypeScript, HTML5, CSS3, TailwindCSS

Databases

PostgreSQL, MongoDB, Redis, SQLite, Supabase, Vector Databases

DevOps & Development Tools

Docker, AWS, Railway, Render, Git, GitHub, CI/CD Pipelines (GitHub Actions)

Integrations & APIs

REST APIs, Webhooks, Airtable, Twilio, Google Workspace APIs, Third-Party API Integrations

AI & Automation

n8n, Make, Zapier, LangChain, AI Agents, RAG, Prompt Engineering, LLM Integration, MCP

PROJECTS

[Idolfluence](#)

AI-Powered Marketing Video Generation Platform

- Built the Softr frontend and integrated it with Airtable, n8n, and Make automation workflows.
- Developed AI workflows for video generation based on selected niches and personas.
- Implemented TikTok publishing and connected the frontend with automation workflows.
- Managed Airtable data structure, webhooks, API integrations, and workflow automation using n8n

Tech Stack: n8n, Make, Twilio, GoTo Connect, OpenAI, ElevenLabs, REST APIs, Webhooks

[Night Shift Automation](#)

Automated Night-Shift Caregiver Check-In & Escalation Platform

- Built caregiver monitoring workflows using n8n, GoTo Connect, Twilio, and SMS automation.
- Automated shift tracking through SwyftOps, Google Workspace, REST APIs, and webhooks.
- Generated compliance reports with automated HTML email notifications and daily summaries.
- Developed caregiver streak tracking and automated performance feedback with dynamic SMS.
- Improved workflow reliability, logging, monitoring, and production error handling processes.

Tech Stack: n8n, GoTo Connect, Twilio, Google Sheets, Google Workspace, REST APIs, Webhooks

[Publisha.io](#)

AI-Powered Campaign Management Platform

Publisha.io is a multi-tenant campaign management platform that enables businesses to plan, create, and publish marketing content efficiently. It supports team collaboration, role-based access, automated campaign scheduling, and multi-channel publishing with secure data separation between organizations. The platform uses LangChain for AI-driven content generation across blogs, social media, and campaigns, with human review workflows and reliable background task scheduling.

Tech Stack: Django, PostgreSQL, Celery, LangChain, LangGraph

[TeamFlow](#)

Task & Project Management Platform

TeamFlow is a full-stack task and project management platform, similar to Jira, designed to help organizations manage projects, tasks, and team operations through a centralized workspace. The platform provides authentication, role-based access control, attendance and timesheet tracking, leave management, notifications, payments, and admin dashboards powered by scalable backend services.

Tech Stack: FastAPI, React, PostgreSQL, Pydantic, CSS

EDUCATION

Bachelor of Science in Artificial Intelligence

2020 - 2024

The Islamia University of Bahawalpur

- Specialized in machine learning, NLP, generative AI, and intelligent system development.
- Developed a JARVIS desktop assistant for voice-controlled Windows task automation.
- Built AI projects using Python, REST APIs, workflow automation, and LLM integrations.

Intermediate in Science

2018 - 2020

Punjab College, Bahawalpur Campus
